TITLE INDEX TO VOLUME 13

Analyzing flame heating and welding, near- and far-field approximation for, 1
Antisymmetric hybrid laminates against thermal buckling, optimal design of, 57

Spectral methods for nonlinear, coupled, thermoelastic rapidly heated rod, 99
Stresses in an ablating cylinder, 263
Surface crack propagation in rolling contact, three-dimensional analysis of thermal effects on, 237
Temperature fields, finite deflections of loosely clamped symmetrically laminated rectangular plates subjected to, 297
Thermal buckling analysis of isotropic and composite plates with a hole, 315
Thermoelastic displacement potential and boundary-element method, steady thermal stress analysis in two-dimensional problems by, 151
Thermoelasticity:
  Cesàro means and autocorrelations in dynamic, 21
  coupled, eigenvalue approach to, 161
  nonlocal, some theorems in, 207
  one-dimensional green's function in temperature-rate dependent, 281
  quasi-static problems of uncoupled, potential theory for, 225
  soliton-like solutions in a nonlinear dynamic coupled, 73
Transient thermal stress:
  due to periodically moving line heat source of composite hollow cylinder, 131
  analysis and bending behavior of an angle-ply laminated slab, 177
  in an infinite plate with a hole due to rotating heat source, 43
  and deformation of a laminated composite beam due to partially distributed heat supply, 193
